Problem B

Bangla Numbers

Time limit: 1 second

Memory limit: 1024 megabytes

Problem Description

Bangla numbers normally use 'kuti' (10000000), 'lakh' (100000), 'hajar' (1000), 'shata' (100) while expanding and converting to text. You are going to write a program to convert a given number to text with them.

Input Format

The input file may contain several test cases. Each case will contain a non-negative number $\leq$ 999999999999999.

Output Format

For each case of input, you have to output a line starting with the case number with four digits adjustment followed by the converted text.

Sample Input 1

```
23764
45897458973958
```

Sample Output 1

```
   1. 23 hajar 7 shata 64
   2. 45 lakh 89 hajar 7 shata 45 kuti 89 lakh 73 hajar 9 shata 58
```
